

Name _____

Learning Target: Use equations to model odd numbers.

Model Odd Numbers Two Ways

Example

Model the number two different ways.

13

$$13 = \underline{6} + \underline{6} + \underline{1}$$

$$13 = \underline{6} + \underline{7}$$

13

$$13 = \underline{7} + \underline{7} - \underline{1}$$

$$13 = \underline{7} + \underline{6}$$

Model the number two different ways.

1.

5

$$5 = \underline{\quad} + \underline{\quad} + \underline{\quad}$$

$$5 = \underline{\quad} + \underline{\quad}$$

and

$$5 = \underline{\quad} + \underline{\quad} - \underline{\quad}$$

$$5 = \underline{\quad} + \underline{\quad}$$

2.

17

$$17 = \underline{\quad} + \underline{\quad} + \underline{\quad}$$

$$17 = \underline{\quad} + \underline{\quad}$$

and

$$17 = \underline{\quad} + \underline{\quad} - \underline{\quad}$$

$$17 = \underline{\quad} + \underline{\quad}$$

3.

11

$$11 = \underline{\quad} + \underline{\quad} + \underline{\quad}$$

and

$$11 = \underline{\quad} + \underline{\quad} - \underline{\quad}$$

4.

19

$$19 = \underline{\quad} + \underline{\quad} + \underline{\quad}$$

and

$$19 = \underline{\quad} + \underline{\quad} - \underline{\quad}$$

Use the model and equation to show that the number is odd.

5.

7

$$7 = \underline{\quad} \bigcirc \underline{\quad} \bigcirc \underline{\quad}$$

6.

15

$$15 = \underline{\quad} \bigcirc \underline{\quad} \bigcirc \underline{\quad}$$

7. **Open-Ended** Would you prefer to use *doubles plus 1* or *doubles minus 1* to show that 9 is odd? Why?
